ABAP Cloud

Technical use cases and recommended technologies

Version 1.0 / May 2023

About this document

This document shall be used a reference for the possible use cases for development and key user extensibility of ABAP Cloud and to find further documentation and material for each of them.

It does not have to be read from beginning to end but can be used to just search for specific use cases.

A good overview can be achieved by reading till the end of chapter *ABAP Cloud Use Cases - Overview and Recommendations.*

The chapter afterwards (*Documentation for the use cases*) will feature available links for documentation for each SAP product where ABAP Cloud is available, blogs and other material.

CREATE A TRANSACTIONAL SAP FIORI APP (WITH RAP / OData UI SERVICE) 16
CREATE AN APPLICATION WITH ANALYTICAL CAPABILITIES (InA SERVICE) 16
Create services for process integration 17
Create services for data integration 18
Create Business Events 18
Consume services for process Integration 18
Consume Business Events 19

ABAP Cloud Detailed Technical Use Cases 20

BUSINESS SERVICE EXPOSURE 20
CREATE CUSTOM UI WITH SAPUI5 / SAP FIORI ELEMENTS ON CUSTOM ODATA SERVICE USING RAP 20
CREATE CUSTOM UI WITH SAPUI5 / SAP FIORI ELEMENTS ON SAP ODATA SERVICE 20
CREATE NEW FLP/IAM CATALOG AND EXTEND FLP/IAM CATALOG 20
Create OData service (using RAP) as API - (OData WEB API) 21
Create SQL service (read-only) - ODBC 22
Create business event (producer) 22
CREATE TRANSACTIONAL API FOR LOCAL CONSUMPTION (RAP BO INTERFACE) 23
CREATE HTTP/REST SERVICES 23
CREATE RFC SERVICES 23
Domain-specific implementation 24
CREATE NEW TABLE / STRUCTURE 24
CREATE CDS VIEW ENTITIES (INCL. CREATION OF ANALYTICAL PROVIDER) 24
CREATE OTHER CDS ENTITIES (TABLE FUNCTIONS, HIERARCHIES, CUSTOM ENTITIES) 25
CREATE NEW CLASS 25
CREATE AND CONSUME CDS RE-USE ARTEFACTS (LIKE CDS SIMPLE TYPES) 26
CREATE DB INDEX FOR TABLES (SECONDARY INDEX, FUZZY SEARCH INDEX) 26
CREATE (TABLE, ENTITY) BUFFERS 26
CREATE SAP HANA CACHES (DYNAMIC VIEW CACHES) 26
CREATE A NEW FUNCTION MODULE 26
CALL RAP BUSINESS OBJECT (USING EML) 27

CALL CODE DYNAMICALLY 27
GENERATE ABAP OBJECTS 27
CREATE/USE ABAP MANAGED DATABASE PROCEDURES (AMDP) 27
CREATE LOCK OBJECTS 28
CREATE A BUSINESS OBJECT (KEY USER TOOLS) 28
ADAPT / EXTEND CDS VIEW WITH CDS METADATA EXTENSION 28
CREATE ANALYTICAL PROJECTION VIEW (KEY USER TOOLS) 28
CREATE BDEF 29
CREATE SERVICE DEFINITION 29
CREATE T100 MESSAGE 29
SERVICE CONSUMPTION 30
CONSUME API WITH TYPED PROXY: ODATA 30
CONSUME API WITH TYPED PROXY: SOAP 30
CONSUME API WITH TYPED PROXY: RFC 30
CONSUME API WITH HTTP 31
CREATE COMMUNICATION SCENARIO FOR SERVICE CONSUMPTION 31
CONSUME EXTERNAL BUSINESS EVENTS VIA AN EVENT CONSUMPTION MODEL 31
RE-USE SERVICES & LIBRARIES 33
CREATE AND SCHEDULE A NEW APPLICATION JOB 33
CREATE CUSTOM EMAIL TEMPLATES BASED ON SAP TEMPLATE 34
CREATE CUSTOM FORM TEMPLATE BASED ON SAP TEMPLATE 34
CREATE CUSTOM EMAIL TEMPLATE WITH CUSTOM DATA SOURCE 34
CREATE CUSTOM FORM TEMPLATE WITH CUSTOM DATA SOURCE 34
SEND AN EMAIL VIA SMTP 34
RENDER EMAIL TEMPLATES 34
USE FACTORY CALENDAR 35
USE NOTES FOR APPLICATION OBJECTS 35
RENDER FORM TEMPLATES USING FORMS BY ADOBE 35
USE NUMBER RANGES 35
USE CHANGE DOCUMENTS 36
USE ARCHIVE DEVELOPMENT KIT 36
USE PRINTING 36
USE APPLICATION LOGS 36
USE UNITS OF MEASURE 37
USE TIMEZONES 37
USE CURRENCY CONVERSION 37
USE SAP BTP DOCUMENT MANAGEMENT 37
USE BTP RULES 37
USE BTP WORKFLOW 38
USE METERING 38
XCO GENERATION AND WORKBENCH APIS 38

XCO STANDARD APIS 38
BUILT-IN QUALITIES - EXTENSIBILITY 40
ADD CUSTOM FIELD TO RAP APPLICATION (APPEND TABLE, EXTEND CDS) 40
ADD CUSTOM FIELD TO NON-RAP APPLICATION AND SERVICE (TABLE APPEND, CDS EXTEND, ODATA/SOAP SERVICE EXTENSION 40
BADI IMPLEMENTATION 40
EXTEND EXISTING RAP BUSINESS OBJECT WITH NEW NODE 40
EXTEND EXISTING RAP BUSINESS OBJECT BEHAVIOR (VALIDATION, DET., ACTION, PROPERTY) 41
EXTEND EXISTING ANALYTICAL CUBES WITH CUSTOM MEASURES AND DIMENSIONS (FIELDS / HIERARCHIES) 41
EXTEND EXISTING ANALYTICAL QUERIES / PROJECTIONS WITH ADDITIONAL FIELDS 41
ADAPT STANDARD UI OR ADD CUSTOM FIELD TO STANDARD UI: SAPUI5 FREESTYLE OR SAP FIORI ELEMENTS 41
ADAPT STANDARD UI OR ADD CUSTOM FIELD TO STANDARD UI: ADAPT SAP CLASSIC DYNPRO WITH SAP PERSONAS 42
ADAPT STANDARD UI OR ADD CUSTOM FIELD TO STANDARD UI: WEB DYNPRO ABAP 42
ADAPT EMAIL/FORM TEMPLATES BASED ON STANDARD OBJECT 42
BUILT-IN QUALITIES – IDENTITY & ACCESS MANAGEMENT 43
CREATE RESTRICTION TYPE 43
CREATE RESTRICTION FIELD 43
CREATE IAM APP 43
CREATE/EXTEND BUSINESS CATALOG 44
CREATE BUSINESS ROLE TEMPLATE 44
ASSIGN A BUSINESS CATALOG TO A BUSINESS ROLE TEMPLATE 44
CREATE AUTHORIZATION FIELD 44
CREATE AUTHORIZATION OBJECT 44
CREATE AUTHORIZATION DEFAULT VALUES 45
SUPPORTED PRIMARY OBJECT TYPES IN ABAP CLOUD 46

Introduction

With the introduction of the ABAP Cloud development model, we published the new extensibility guide providing an overview of the extensibility options for the mentioned products and guidelines for project managers, key users, and ABAP developers.

This document provides a deeper insight into the possible and recommended use cases and technologies (Chapter 2) within the ABAP Cloud development model as well as the needed resources (Chapter 3) to apply them in extension or stand-alone projects.

The ABAP Cloud development model is available for all SAP S/4HANA editions as well as for SAP BTP[1], ABAP environment.

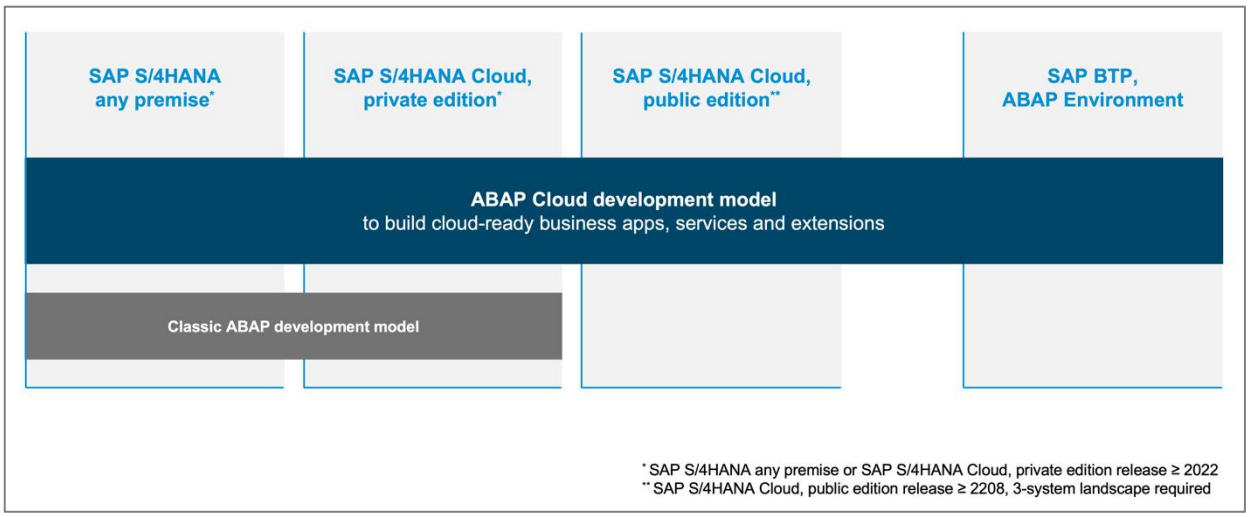

Figure 1 – The ABAP Cloud development model in SAP Products

ABAP Cloud Use Cases - Overview and Recommendations

The following chapter and tables describe the recommended options implementing the use cases with ABAP Cloud for developers and key users. The use cases are categorized in the different layers of the ABAP Cloud map.

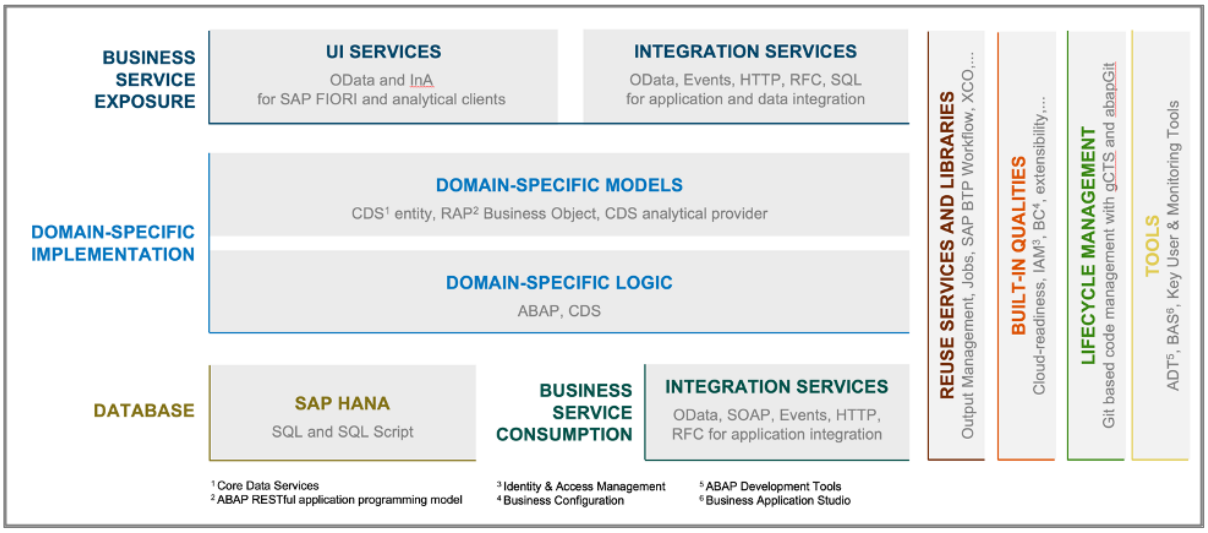

Figure 2 - The ABAP Cloud map

These symbols and colors explain the availability of the specific use case in the tables:

●	Recommended option
○	Recommended with limitations[2]
○	Alternative option if recommended option is not available
○	Not recommended
-	Not available: not relevant or not planned
future	Not available: planned for one of the next releases (no guarantee)

[2] More details on limitations can be found in the detailed chapter of the specific use case.

ABAP Cloud End-to-End Use Cases

ABAP Cloud is designed to build cloud ready, robust business applications. Services play a major role in this design, but also the possibility to build and deploy UIs on these services is a main pillar in ABAP Cloud. Here, you will find the possible end-to-end use cases recommended with ABAP Cloud for exposing services and deploying UIs.

	Use Case	Classic ABAP developer extensibility	ABAP Cloud developer extensibility	Key user extensibility
END-TO-END USE CASES	SERVICE WITH UI			
	Create an SAP Fiori app (based on OData UI service)	○	●	●
	Create an app with analytical capabilities (InA service)	○	●	●
	INTEGRATION SERVICE			
	Create services for process integration	○	●	-
	Create services for data integration	○	●	-
	Create Business Events	○	●	-
	Consume services for process Integration	○	●	-
	Consume Business Events	○	●	-

Legend

ABAP Cloud Detailed Use Cases

The following table provides recommendations for the various extension possibilities (data model, business logic, or user interface) in the context of the extensibility model separated by classic ABAP extensibility and ABAP Cloud extensibility with the two personas Developer and Key User. The various options are detailed in the following sections.

Not listed use cases are not supported and should be considered as not recommended.

Remark: All mentioned use-cases are targeted for custom development – a customer or partner developer creates custom object(s) for the specific use-case in the customer/partner namespace.

BUSINESS SERVICE EXPOSURE

	Use Case	Classic ABAP developer extensibility	ABAP Cloud developer extensibility	Key user extensibility
BUSINESS SERVICE EXPOSURE	UI SERVICES			
	Create an OData service (using RAP) for SAPUI5 / SAP Fiori Elements	○	●	○
	Create an InA Service for analytical clients	○	●	●
	Create a Custom UI with SAPUI5 / SAP Fiori Elements on custom OData Service	○	●	-
	Create a Custom UI with SAPUI5 / SAP Fiori Elements on SAP OData Service	○	-	-
	Create a Custom UI with Dynpro / Web Dynpro	○	-	-
	Create a custom UI: New analytical UI	○	●	●
	INTEGRATION SERVICES			
	Create OData service (using RAP) as API	○	●	○
	Create OData service (using SEGW)	○	-	-
	Create HTTP/REST service	○	●	-
	Create SQL service (read-only) - ODBC	○	●	-
	Create SOAP service	○	future	-
	Create RFC service (using function module)	○	○	-
	Create business event producer	○	●	-

Legend

DOMAIN SPECIFIC IMPLEMENTATION

	Use Case	Classic ABAP developer extensibility	ABAP Cloud developer extensibility	Key user extensibility
DOMAIN SPECIFIC IMPLEMENTATION	DOMAIN-SPECIFIC LOGIC			
	Create a DDIC object (table, structure, data element, domain)	○	●	●
	Create CDS view entities (incl. creation of analytical provider)	○	●	●
	Create other CDS Entities (table functions, hierarchies, custom entities)	○	●	-
	Create and consume a CDS re-use artefacts (like CDS simple types)	○	●	-
	Create a DB Index for tables (secondary Index, fuzzy search Index)	○	●	-
	Create (table, entity) buffers	○	●	-
	Create SAP HANA caches (dynamic view caches)	○	●	-
	Create a new class	○	●	○
	Create a new function module / group	○	○	-
	Call code dynamically	○	●	-
	Call a RAP[3] business object (using EML[4])	○	●	future
	Generate ABAP objects	○	●	-
	Create/use ABAP managed database procedures	○	●	-
	Create lock objects	○	●	
	Create a message class (T100)	○	●	-
	DOMAIN-SPECIFIC MODELING			
	Create a business object	○	●	●
	Adapt CDS view entity with CDS metadata extension	○	●	-
	Create analytical projection view	○	●	●
	Create BDEF[5]	○	●	-
	Create service definition	○	●	-

Legend

[3] ABAP RESTful application programming model

SERVICE CONSUMPTION

	Use Case	Classic ABAP developer extensibility	ABAP Cloud developer extensibility	Key user extensibility
SERVICE CONSUMPTION	REMOTE SERVICE CONSUMPTION			
	Consume an API with typed proxy: OData	○	●	-
	Consume an API with typed proxy: SOAP	○	●	-
	Consume an API with typed proxy: RFC	○	●	-
	Consume an API with HTTP	○	●	●
	Create a communication scenario for service consumption[6]	○	●	●
	Create an event consumption model for external Business Events	○	●	-

Legend

[6] Only supported in SAP BTP, ABAP Environment and SAP S/4 HANA public cloud

RE-USE SERVICES & LIBRARIES

	Use Case	Classic ABAP developer extensibility	ABAP Cloud developer extensibility	Key user extensibility
	RE-USE LIBRARIES & SERVICES			
RE-USE SERVICES & LIBRARIES	Create custom email templates based on SAP template	○	future	●
	Create custom form template based on SAP template	○	future	●
	Create custom email template with custom data source	○	future	-
	Create custom form template with custom data source	○	future	-
	Send an email	○	●	-
	Render email templates	○	future	-
	Use factory calendar	○	●	-
	Use notes for application objects	○	future	-
	Render form templates	○	●	-
	Use number ranges	○	●	-
	Use change documents	○	●	●
	Use archive development kit	○	future	-
	Use printing	○	●	-
	Use application logs	○	●	-
	Use units of measure	○	●	●
	Use timezones	○	●	●
	Use currency conversion	○	●	-
	Use business address service	○	●	-
	Use attachment service	○	future	-
	Use business partner CDS	○	●	●
	Use BTP document management	○	●	-
	Use BTP rules	○	●	●
	Use BTP Workflow	○	●	-
	Use metering	○	●	-
	Use Information retrieval (IRF) & Information lifecycle management (ILM)	○	future	●
	XCO ABAP repository	○	●	-
	XCO standard library	○	●	●

Legend

BUILT-IN QUALITIES

	Use Case	Classic ABAP developer extensibility	ABAP Cloud developer extensibility	Key user extensibility
BUILT-IN QUALITIES	EXTENSIBILITY			
	Add custom field to RAP application (append table, extend CDS)	○	○	●
	Add custom field to non-RAP application and service (table append, CDS extend, OData/SOAP service extension	○	-	●
	BAdI implementation	○	●	●
	Extend logic by old/not-released BAdI or user exit	○	-	-
	Extend existing RAP business object with new node	○	●	future
	Extend existing RAP business object behavior (validation, det., action, property)	○	●	future
	Extend existing analytical cubes with custom measures and dimensions (fields or hierarchies)	○	●	●
	Extend existing analytical queries / projections with additional fields	○	●	●
	Adapt standard UI or add custom field to standard UI: SAPUI5 Freestyle or SAP Fiori Elements	○	future	●
	Adapt standard UI or add custom field to standard UI: Adapt SAP Classic Dynpro with SAP Personas	○	-	●
	Adapt standard UI or add custom field to standard UI: Web Dynpro ABAP	○	-	●
	Adapt email/form templates based on standard object	○	future	●
	IDENTIY & ACCESS MANAGEMENT[7]			
	Create restriction type	-	●	-
	Create restriction field	-	●	-
	Create IAM app	-	●	-
	Create business catalog	-	●	-
	Extend business catalog	-	-	●

[7] Only supported in SAP BTP, ABAP Environment and SAP S/4 HANA public cloud

ABAP Cloud Detailed Technical Use Cases

BUSINESS SERVICE EXPOSURE

CREATE CUSTOM UI WITH SAPUI5 / SAP FIORI ELEMENTS ON CUSTOM ODATA SERVICE USING RAP

Limitation for Key User Extensibility: The Custom BO Application to build custom business objects with Key User extensibility was introduced before RAP and the developer extensibility. The migration to RAP is in progress, but not yet released. Thus, the Custom BOs are not yet accessible in developer extensibility.

Related documentation & resources

ABAP Cloud developer extensibility in all editions of SAP S/4HANA	Develop an SAP Fiori Application UI and Deploy it to SAP S/4HANA Cloud Using SAP Business Application Studio (Only possible for now with in SAP S/4HANA Cloud, public edition)
ABAP Cloud key user extensibility in SAP S/4HANA	Creating a Custom SAP Fiori Application Using SAP Business Application Studio
ABAP Cloud developer extensibility in SAP BTP ABAP Environment	Develop an SAP Fiori Application UI and Deploy it to ABAP Using SAP Business Application Studio
Involved ABAP object types	UIAD, SMIM, WAPA, SICF

CREATE CUSTOM UI WITH SAPUI5 / SAP FIORI ELEMENTS ON SAP ODATA SERVICE

OData services for SAP Fiori UIs are not released. They are considered as *private* for the SAP Fiori UI. If customers create a custom SAP Fiori UI on an SAP OData service, this is not LM-stable. To create lifecycle-stable custom SAP Fiori UIs on an SAP OData service, customers should use OData services listed on the SAP API Business Hub and create the custom UI/app using SAP Cloud SDK.

CREATE NEW FLP/IAM CATALOG AND EXTEND FLP/IAM CATALOG

Related documentation & resources

ABAP cheat sheet	ABAP Object Orientation

CREATE/USE ABAP MANAGED DATABASE PROCEDURES (AMDP)

AMDPs may only use objects released with the C4 contract. Initially, only classes and interfaces can be released with C4. And these must not contain anything that is not AMDP-capable (AMDP only). Also, there are very strict compatibility rules when it comes to types - currently no extensions are allowed.
If SAP objects are used, they may only be used in such a way that later extensions are possible - but we currently only have a provisional check on this.

AMDPs are limited to read-only in ABAP Cloud Usage at the moment.

RE-USE SERVICES & LIBRARIES

A key element of ABAP Cloud are libraries and services that are provided directly in stack and automatically come with the ABAP product without any additional cost. At the same time, they are well-integrated into the programming model to optimally reduce TCD for business applications.

Moreover, there are several libraries for simplifying and standardizing everyday development tasks

- ABAP language library (runtime Type Info, String, Date/Time, …)
- XCO ABAP repository library (read or generate repository objects)
- XCO I18N library (read and maintain translations for custom repository objects)
- XCO standard library (XLSX, JSON, …)

The set of ABAP Cloud services and libraries is continuously reviewed and extended according to stakeholder and customer requests.

SUPPORTED PRIMARY OBJECT TYPES IN ABAP CLOUD

Object Type	Description
ADSO	Advanced data storage object
ADVC	Fiori UI adaptation project
ADVD	Fiori UI adaptation project
AOBJ	Archiving object
APIS	API release state of objects
APLO	Application log object
AUTH	Authorization field
BDEF	Behavior definition
CACC	Fiori UI adaptation project
CACD	Fiori UI adaptation project
CCAC	Fiori UI adaptation project
CCAD	Fiori UI adaptation project
CHDO	Change document object
CLAS	Class
DCLS	CDS access control
DDCC	Dynamic view cache
DDLS	CDS data definition
DDLX	CDS metadata extension
DEVC	Package
DOMA	Domain
DRTY	CDS simple type
DSFD	CDS scalar function definition
DSFI	CDS scalar function implementation reference
DTDC	Data buffer
DTEB	Dynamic cache
DTEL	Data element
EEEC	Event consumption model
ENHO	Enhancement implementation
ENHS	Enhancement spot
ENQU	Lock object
EVTB	Event binding
FUGR	Function group
FUGS	Function module
G4BA	Dependent object types for OData V2/V4 services
G4BS	Dependent object types for OData V2/V4 services
GSMP	Metering object
HTTP	HTTP service

Object Type	Description
INA1	InA service
INTF	Interface
IWMO	Dependent object types for OData V2/V4 services
IWOM	Dependent object types for OData V2/V4 services
IWSG	Dependent object types for OData V2/V4 services
IWSV	Dependent object types for OData V2/V4 services
IWVB	Dependent object types for OData V2/V4 services
LRCC	Fiori UI adaptation project
LRCD	Fiori UI adaptation project
MSAG	T100 message
NROB	Number range object
NTTY	Notes for application objects
NTTA	Notes for application objects
SAJC	Application job catalog entry
SAJT	Application job template
SCO1	Communication scenario (public cloud only)
SCO2	Inbound service (public cloud only)
SCO3	Outbound service (public cloud only)
SFPF	Form template
SIA1	IAM business catalog (public cloud only)
SIA2	IAM restriction type (public cloud only)
SIA5	IAM restriction field (public cloud only)
SIA6	IAM app (public cloud only)
SIA8	Business role template (public cloud only)
SMIM	Mime object
SMTG	Email template
SQL1	SQL service
SRVB	Service binding
SRVC	Service consumption model (for OData, SOAP and RFC)
SRVD	Service definition
SUSH	Authorization defaults
SUSO	Authorization object
TABL	Structure, database table
TTYP	Table type
UIAD	FLP app descriptor item
WAPA	BSP repository for UI application
XSLT	Transformation
XINX	DB index
